EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Clifford J. Mass on 20 November 2009.

The application has been amended as follows:

2. Claim 1 is rewritten as follows:

1. A cladding element for use in a cladding element assembly, the cladding element including:

a substantially flat web having a pair of opposed longitudinal edges;

a male rib formation extending at least partially along one longitudinal edge and having a pair of spaced apart inner and outer upstanding ribs and an engaging formation, the inner and outer upstanding ribs each being substantially perpendicular to the flat web; and

a female rib formation extending at least partially along the other longitudinal edge and having an inner upstanding rib, an outer depending rib and a joining section[,] between the inner and outer ribs and displaced from the plane of the web, and a corresponding engaging formation, at least one of the male or female rib formations being at least partially resiliently flexible, the inner

Art Unit: 3633

upstanding rib and the outer depending rib each being substantially perpendicular to the flat web;

wherein the element is adapted for assembly with a like element by positioning of the male formation substantially within the female formation with their respective engaging formations in engagement, whereby the assembled male and female formations together form a substantially rectangular closed channel capable of concealment of fixing means used to fix the cladding elements to a supporting structure; and

wherein, when a major visible surface is formed on a side of the web remote from the male and female formations, the fixing means is positioned in the joining section, and when the major visible surface is formed on a side of the web adjacent to the male and female formations, the fixing means is positioned between the inner and outer ribs of the male formation; and

wherein the engaging formation of the male rib formation includes:

a flange angled inwardly and towards the web on the distal end of the inner male rib formation and the corresponding engaging formation of the female rib formation is a flange angled inwardly and away from the web on the distal end of the outer female rib formation; and

an outwardly directed flange on the distal end of the outer male rib formation and the corresponding engaging formation of the female rib formation is an outwardly directed recess on the distal end of the inner female rib formation.

Art Unit: 3633

3. Cancel claims 4, 7 and 8.
4. Change the dependency of claim 5 from "4" to --1--.
5. The following is an examiner's statement of reasons for allowance:

While Oehlert (4,266,385) teaches "an outwardly directed flange on the distal end of the outer male rib formation and the corresponding engaging formation of the female rib formation is an outwardly directed recess" (as in illustrated in figure 6 of Oehlert), Oehlert fails to disclose the engaging formation of the female rib formation is on the distal end of the inner female rib formation. It would not be obvious to modify Oehlert with the combination of a reference such as Player (4,109,437) to teach the deficiencies of Oehlert since such a combination would rely solely on hindsight reasoning and would destroy the intended purpose of Oehlert. If the flange 106 of Oehlert was modified to extend to and engage with the distal end of the female rib formation 110 or 112 of figure 6, the connection would not work properly.

A combination of references using Player as the primary reference would not teach the claimed invention because it would be impossible to modify Player to include inner and outer male upstanding ribs as claimed in claim 1 and taught in Oehlert since modifying Player in this way would destroy the intention and use of the invention.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
